Department of Computer Science and Engineering (CSE)

REPORT ON CSE 3200

Course Title: System Development Project

Project Name: A System to support the Rural women for selling the homemade products through online platform

Supervised By:
Dr. Md. Aminul Haque Akhand
Professor
Department of Computer
Science and Engineering
Khulna University of
Engineering & Technology

Submitted by:
Taslima Akter Joty
Roll No: 1807046
Fairuz Ahmed Tuna
Roll No: 1807116
Department of Computer
Science and Engineering
Khulna University of
Engineering & Technology

**Date of Submission:** 27/12/2022

ER Diagram:

Figure 1.3: ER diagram of the system

We have used 4 tables to which are connected through some information. User table which stores the information about buyer & seller. Product table stores information about product. Order table stores information about order. Wish list table stores information about favorite products of a user.

6. Implementation: We have developed the system into two parts.

- Android Application: We have developed the android application in java language. Firebase have been used for handling the backend of the application.
- Website: We have developed a website for handling admin panel using HTML, CSS, Javascript.

7. System Functionality:

i)Registration: We have tried to make the registration process as simple as possible. As the users includes rural women, it will be painful for them to give many information for registration. So in this system they have to give the image of their national Id card and provide username, password, role of user and phone number.
